SUMMARY

Final-year Computer Science and Engineering (AI & ML) student with a strong foundation in Python, SQL, software development, APIs, and database management. Experienced in developing software applications, integrating backend services, analyzing technical issues, and evaluating system performance through academic projects. Demonstrates problem-solving, analytical thinking, teamwork, and leadership through technical projects and **IEEE CIS Vice President** responsibilities. Eager to learn new technologies, contribute to technical projects, and support troubleshooting and system improvement in a collaborative engineering environment.

EDUCATION

BE in Computer Science (Artificial Intelligence & Machine Learning)
Vidyavardhaka College of Engineering **CGPA: 8.36** — 2027

PUC (PCMB), STG PU College 91.6% — 2023

10th (STATE), Adarsha Vidyalaya 96.32% — 2021

SKILLS

Programming: Python| SQL| Java

Software & APIs: FastAPI| Flask| Node.js| REST APIs| Postman

Core Knowledge: Computer Networks| Database Management Systems| Operating Systems| Object-Oriented Programming

Databases: PostgreSQL | MySQL

Tools & Technologies: Git| GitHub| Wireshark| Jira| Power BI

Technical Skills: Problem-Solving| Debugging | API Testing| Data Analysis| Technical Documentation

Communication Skills: Technical Documentation| Presentation Preparation| Content Writing| Information Simplification

CERTIFICATIONS

- **Software Development Life Cycle (SDLC)** — Coursera
- **Saviynt Certified**
- **Hackabhigin** — Participated in National-Level 24-Hour Hackathon

EXPERIENCE

IBM SkillsBuild | CSRBOX — Virtual Internship (4 Weeks)

- Developed responsive web application components using modern web technologies.
- Integrated REST APIs and backend services to improve application functionality and user experience.

Agentic AI Workshop
Training on autonomous AI agents, decision-making, and workflow automation

PROJECTS

Inventory Management System -- GitHub

- Developed a web application for product tracking, inventory management, and business reporting.
- Integrated REST APIs, authentication, and analytics dashboard features.
- Focused on presenting inventory information clearly to support business operations.

Real-Time Face Expression Detection System -- GitHub

- Built a real-time facial expression classification application using OpenCV, TensorFlow, and Flask.
- Integrated camera input, image processing, and model predictions through a web backend.

Rice Variety Identification System Using AI & FastAPI -- GitHub

- Developed an AI-based application to identify five rice varieties using MobileNetV2 transfer learning.
- Designed image-processing and data-validation workflows and evaluated model performance using classification metrics.
- Documented the system workflow, functionality, and application use case.

ACHIEVEMENTS & ACTIVITIES

- **NPTEL — Smart Cities**: Elite + Gold | 91% — Successfully completed a 12-week IIT-certified NPTEL course.
- **1st Runner-up** of Pathcraft — The Gen AI Webpage Architect Challenge.
- Successfully organized a **Data-thon event**, facilitating dataset sharing, participant coordination, and technical support to ensure smooth execution of the data-driven challenge.
